

DNGA-230.100 Double Level Control Unit

Input: 4 resistance inputs

Outputs: 2 Relays

Front-adjustable input sensitivity

Galvanic separation

Power supply 230 V

Min./Max. Level registration

Description

The Double Level Control Unit has two independent, galvanically separated electrical circuits. Each circuit controls a relay with Normally Open contacts. The status of each relay changes as a function of the two resistance inputs.

The two inputs act with a hysteresis. The sensibility of the relay circuit can be adjusted from the front of the module. LED's indicates an activated relay.

The module can be used as an evaluation module for LSKx2x or LSKx5x sensors. Please refer to the application example(s).
